EXPLANATORY NOTE ON THE NATIONAL GRID

The system of squares on this map forms part of the National Grid. All lines are 10 kilometres apart, the marginal numbers against each line denoting its distance East or North from the ORIGIN of the grid (a point South-West of Land's End). The Grid enables the position of any point to be defined by giving, in proper sequence, the numbers denoting its distance East and North from the Origin, distance East always being given first. Such a sequence of figures is known as a GRID REFERENCE.

For convenience of reference, every tenth line of the Grid is thickened, the thickened lines forming a pattern of major squares with sides 100 kilometres. Each square is identified by a number which always consists of two figures. The first figure represents the distance in hundreds of kilometres between the origin and the South-West corner of the square in an Easterly direction, and the second a similar distance in a Northerly direction. These figures can be read either from the adjacent diagram or from the margin of the Map. The number of the major square in which a point lies forms the first element in its Grid Reference.

Within the major square, the position of a point is indicated by giving its distance in kilometres East (two figures) and North (two figures) from the South-West corner. The four figures so obtained are written consecutively, distance East coming first, to form the second part of the Grid Reference.

Thus the full Reference to the town of NEWMARKET is 52/6463

To locate this point on the map proceed as follows:—

(i) Identify major square 52—it lies East of the thickened grid line marked 00 in North and South margins, and North of thickened grid line marked 20 in East and West Margins.

(ii) NEWMARKET: '64 kilometres East of the South-West corner of major square 52. Starting from that latter point, move East to the fine grid line numbered 60 in the North and South margins and estimate four tenths towards line 70.
NEWMARKET lies on a North-South line through the point reached.

(iii) NEWMARKET is 63 kilometres North of the South-West corner of major square 52. Move North from this corner to the fine grid line numbered 60 in the East and West margins and estimate three tenths towards line 70.
NEWMARKET lies where an East-West line through this point cuts the line defined in (ii) above.

AREAS RECOMMENDED IN THE REPORT OF THE SCOTTISH NATIONAL PARKS SURVEY COMMITTEE (CMD. 6631) AS SUITABLE FOR NATIONAL PARKS IN SCOTLAND ARE SHOWN IN ORDER OF PREFERENCE.

AREAS ON PRIORITY LIST

AREAS ON RESERVE LIST

A Scottish National Parks Committee has been appointed to consider measures necessary for the establishment of National Parks and the conservation of Wild Life in Scotland.

NATIONAL PARKS AND CONSERVATION AREAS

Proposed by The National Parks Committee (England and Wales)

Proposed National Parks

Proposed Conservation Areas

Urban Populations

The areas of the circles are exactly proportional to the estimated 1938 Populations of each urban area. The total population of the County of London is represented by one symbol.
